PRODUCTION RELEASE

NikNote Transformation
Progress Report

Ab tak kya deliver hua, production par kya live hai, aur abhi kya baaki hai - ek detailed handoff.

CURRENT STATUS

LIVE IN PRODUCTION

READY

Vercel reports READY / PROMOTED; production aliases assigned.

696	39	35	17
tests passed	test files	public routes built	focused tests

Delivery status by workstream

DONE	DONE	PASS	LIVE	OPEN
PLAYGROUND	BRAND + HUB	TESTS + BUILD	PRODUCTION	VISUAL QA

EXECUTIVE SUMMARY

- Responsive /playground is shipped with local-only saving, editing, arrangement, keyboard movement and SVG export.
- Hub and shared NikAI artwork now follow the blue / coral / yellow brand direction; intentional purple choices remain.
- Code checks passed and production is live. The main open item is a human visual review across phone, tablet and desktop.

Full detail, evidence, warnings and next steps follow on pages 2-6.

01 / PRODUCT DELIVERED

Creative Playground

A responsive, local-first canvas for arranging ideas - not a fake cloud feature.

ROUTE

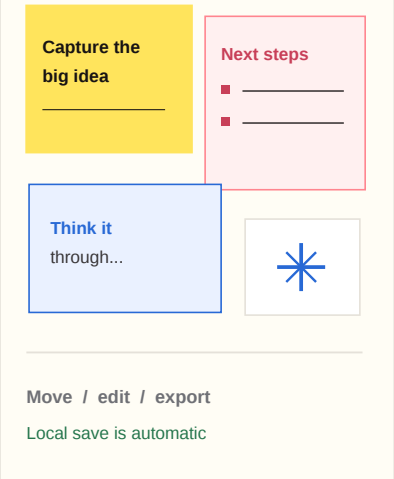

/playground

Workspace / noindex page; saved board stays on this browser and device.

What people can do

- Create sticky notes, checklists, thought bubbles and star / spark pieces.
- Drag pieces on the canvas; edit text directly; resize and rotate selected pieces.
- Move items with the keyboard and use focusable controls for canvas actions.
- Start from four distinct starter layouts; choose from four paper themes and six piece colors.
- Export the current board as SVG for a portable, editable visual snapshot.
- Respect the saved reduced-motion preference for Playground transitions.

CANVAS PREVIEW

CONTENT

4 piece types

Notes, checklists, thought bubbles, stars.

SAFETY

24-piece cap

Validated storage; duplicate IDs repaired.

PORTABILITY

SVG export

Board stays editable and device-local.

LOCAL-FIRST DATA FLOW

USER EDIT

Storage key: niknote.playground.canvas.v1

No new database, cloud-sync promise or mock search results were added.

NAV ENTRY POINTS

Desktop shell | Workspace sidebar | Hub | Mobile quick actions / drawer | Command palette | Onboarding

02 / VISUAL SYSTEM

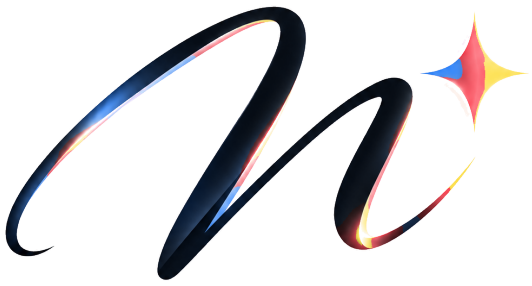

Brand, Hub & app integration

Retuned generic UI accents to the established identity while preserving colors with product meaning.

BRAND PALETTE

LOGO BLUE	UI BLUE	CORAL	ACCESSIBLE ROSE	YELLOW	PAPER	INK
#347FF0	#2869D5	#FF858F	#C83F58	#FFE45C	#FFFDF5	#171313

NIKAI MARK

Shared N-and-spark artwork is retinted to brand blue, coral and yellow. Its recognizable silhouette is kept; the supplied primary NikNote mark is not replaced.

WHAT THE AUDIT CHANGED

- Refreshed Hub color hierarchy and its Playground entry point.
- Retuned generic mobile shadows, dark premium tints and neutral accents.
- Moved generic admin chart-title accents to accessible UI blue.
- Renamed stale auth accent alias --auth-violet to --auth-coral.
- Aligned the unused design-system token palette with the brand guide.

PLAYGROUND NAVIGATION MAP

IMPORTANT COLOR / DATA GUARDRAILS

Purple remains available for user-selected ink and appearance choices, and meaningful category / analytics colors stay intact. QuickSearch.tsx mock results were not used as real data. The Playground intentionally has no cloud sync or database dependency.

03 / QUALITY EVIDENCE

Checks, tests & build output

The latest code state passed its main gates before the production build was promoted.

FULL TEST SUITE

696 / 696

passed

39 test files

0 failed

Test outcomes

696 PASSED | 0 FAILED

Scale: every recorded test in the completed full run passed.

Focused Playground model / UI + SEO run

17 tests | 3 files | duplicate-ID repair regression included

VERIFICATION GATES

PASS	PASS	PASS	PASS
TYPECHECK	FOCUSED ESLINT	PRODUCTION BUILD	DIFF / WHITESPACE

PRODUCTION BUILD

35 public routes prerendered. Private /playground is excluded from sitemap / prerender list by design.

LINT SCOPE

25 legacy diagnostics remain in a broader changed-file lint pass; focused lint on the new Playground and selected retuned surfaces passed.

KNOWN WARNINGS - NOT BUILD BLOCKERS

- Build: stale Browserslist data; mixed static / dynamic imports; some bundles exceed the 600 kB warning threshold.
- Full tests: chart container size and React state warnings; guest Supabase auth requests were blocked in the sandbox; mocked payment and PDF fixture warnings appeared. The suite still passed.
- Repository lint debt: earlier full-repo baseline was 395 errors and 68 warnings. The broad lint number is legacy debt, not a claim that the new surfaces failed targeted lint.

04 / RELEASE RECORD

Production & repository status

The app deployment and the GitHub handoff are both traceable to exact commits.

SCOPE BOUNDARY

No Supabase schema, database, secrets or Vercel environment settings were changed. Playground data is localStorage on the current browser / device. Production is already live; the later d41cfdb change only records the deployment in project documentation.

05 / NEXT ACTIONS

What is still left?

No known release-blocking code item is open. The main gap is a real human responsive visual pass.

OPEN ITEM

Human visual QA on the deployed pages

Screenshot automation failed in this sandbox: missing libnspr4.so.

NOW

1. Check the live experience on real viewport sizes

Open www.niknote.online/playground at desktop, tablet and phone widths. Confirm no clipped canvas, hidden controls, horizontal scroll, or overlap with mobile chrome.

NOW

2. Walk through the main Playground flows

Create and edit each piece type; drag and keyboard-move items; change paper; reload to confirm local save; export SVG; verify the reduced-motion setting. Tests cover key paths, but a human pass checks the real browser feel.

OPTIONAL

3. Triage existing lint and build warnings

The wider changed-file lint pass shows 25 legacy diagnostics. Separately, update stale Browserslist data, review mixed imports and consider splitting oversized chunks. These warnings did not block the successful build or deployment.

HUMAN QA CHECKLIST

- [ ] Mobile 390 px: safe areas, touch controls, scroll and bottom navigation
- [ ] Tablet / desktop: canvas sizing, toolbar placement and responsive side panels
- [ ] Keyboard: focus order, selection, arrow movement and escape behavior
- [ ] Persistence: saved board survives refresh; malformed local data fails safely
- [ ] Export: SVG opens and contains the expected notes / text
- [ ] Motion: reduced-motion preference suppresses nonessential transitions

FINAL READOUT

Implemented + verified + deployed. Remaining: visual sign-off and optional maintenance cleanup. One product boundary to remember: Playground boards are device-local and do not sync across devices.
